

Any app. Any device. Anywhere. Anytime.

Deploy **100% of apps**

Apps perform **as if installed**

Self-service, **on-demand**

Reduce software **license costs**

Any device, any platform

Awesome student experience!

AppsAnywhere

91% of students expect their university to provide an "app store" to access software. So, in collaboration with our customers, we've developed AppsAnywhere, a beautiful web interface that gives students access to all the software they need, from a familiar and customizable portal.

Any app, anywhere

We've reinvented the way students access apps. AppsAnywhere enables access to software on *and* off campus.

Apps run at warp-speed

Apps virtualized and launched through AppsAnywhere run as if they were installed locally.

Reduce license costs

Get in-depth insight into software licensing, including stats like peak concurrency and least-used apps.

A good-looking, customizable app store.

AppsAnywhere is the most beautiful way to deliver apps to students and staff. It gives your students a seamless, consistent and cool way of accessing the software they need, through a web-based portal that your institution can really make its own.

Drive down university software license costs with detailed reporting.

AppsAnywhere's real time analytics drive down university license costs by providing details on which apps are being used and, more importantly, which aren't!

Many universities have reduced their app load by 25%; saving money from licenses, improving adherence to vendor licensing and increasing efficiency by no longer packaging unwanted apps.

12 delivery methods. 1 launch button.

No one method of delivering apps is the best. That's why we support a variety of delivery methods, including Cloudpaging, Microsoft SCCM and App-V, and VMware. That means you can deliver ANY app and deploy them all through AppsAnywhere, our beautiful app store-like portal. And yes, that includes 'tricky' heavyweight Windows apps like SPSS, SAS, NVivo, MATLAB and AutoCAD!

1,500,000+
